## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-25, 27-32, 34-37 and 39-51 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 05-292036.

JP 05-292036 discloses an optical amplifier (figure 1) comprising: an optical fiber (1) through which an input light travels, the input light being amplified as the input light travels through the fiber via first pumping light traveling through the fiber in an opposite direction (suggested by figure 2a, element 93) than the input light; an optical splitter (3) splitting off a portion of the amplified input light, the first pumping light being controlled in accordance with a monitored power of said split portion (taught by operation of elements 7a and 8); and an optical fiber amplifier (2), optically connected to the splitter, amplifying the input light having a portion split off therefrom via second pumping light (suggested by the pumping means disclosed by figures 2a and 2b).

Claim 1 reads on the structure recited above.

Claim 2 is a part of fibers 1 and 2.

Claim 3 is taught by elements 95 or 84 of figures 2a and 2b.

Claims 4-6 are taught by element 7a.

Art Unit: 3663

Claims 7-25, 27-32, 34-37 and 39-51 are taught by the structure applied to claims 1-6.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 26, 33 and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 05-292036 in view of JP 05-048207.

Claims 26, 33 and 38 are different from JP 05-292036 in that they recite no components between the splitter and the fiber amplifier.

JP 05-048207 teaches (figure 1) that it was known at the time of the present application to have no optical components between a splitter and amplifying fiber.

It would have been obvious to have applied this teaching to JP 05-292036 when seeking to reduce parts, thus producing claims 26, 33 and 38.
